

KEY FEATURES

This revolutionary construction has resulted in a flooring system that is:

1. MOISTURE RESISTANT

Resistant to moisture, the board will move and swell less, and can therefore be used in areas previously reserved for tiles only.

2. DURABILITY TESTED

11 coats of UV diamond tech finish D makes the product hard wearing. Internationally recognised wear tests have determined that the product is up to 10 times more durable than other leading flooring systems.

3. SUSTAINABLE

Environmentally committed we avoid unnecessary waste during the manufacturing process. Over 75% of the product comes from renewable resources and we use 90% less wood than traditional solid flooring.

4. ACOUSTICALLY INSULATED

The cutting edge One-Step Adhesive used in the laying process provides increased sound insulation. The flooring combined with this adhesive completely replaces the need for acoustic rubber matting and any type of physical moisture barrier when installing over concrete.

5. TEMPERATURE TOLERANT

The composite base allows the board to effectively and efficiently transfer heat without the risk of shrinkage. The composite base has similar thermal conductivity to a ceramic tile or cement.

6. EASY TO INSTALL

Simply removed from the box and placed on a bed of One-Step Adhesive. The board can be cut easily using conventional tools and the glue can clean up with the use of a citrus spray.

7. GLOBAL INNOVATION

Designed with global conditions in mind, our flooring has been tested in extreme conditions from the dry of the Mid-American winter to the humidity of tropical North Australian summer.

8. ARCHITECTURAL INFLUENCE

The colour and design patterns have been developed in consultation with leading architects globally. We understand the importance of getting the right result.

INTELLIGENT BY DESIGN AND CLEVER TO THE CORE.

DESIGNED TO BE BOTH HIGHLY FUNCTIONAL AND AESTHETICALLY SUPERIOR FOR LONGER

MANUFACTURED FROM MORE ENVIRONMENTALLY AWARE DISCIPLINES, HEATWOOD FLOORING CELEBRATES THE BEAUTY OF WOOD, WHILE ACHIEVING A UNIQUE BALANCE BETWEEN NATURAL APPEARANCE AND SUPERIOR FUNCTIONALITY IN A WIDER RANGE OF ENVIRONMENTS.

2 SOLID TIMBER TOP LAYER
2MM OF PREMIUM WOOD.
AVAILABLE IN VARIOUS COLOUR FINISHES.

3 PATENTED TECHNOLOGY
UNIQUE PATENTED CORE MADE FROM A COMPOSITE OF RECYCLED WOOD PULP AND STONE.

1 FINISHING
SUPER HARD WEARING AND SCRATCH RESISTANT. 11 COATS OF UV DIAMOND TECHNOLOGY FINISH.

4 PROFILE
4 SIDED TONGUE & GROOVE PROFILE OFFERING FLEXIBILITY WITH PATTERNS AND STYLES.

5 SOUND REDUCTION
INBUILT ACOUSTIC AND MOISTURE BARRIER WITHIN THE ONE-STEP ADHESIVE APPLICATION.
